Database	DAO engine or SQL Server depending on version of Maxload Purchased	DAO engine or SQL Server depending on version of Maxload Purchased

Software Installation Information

1. MaxLoad Pro software is installed directly on the Citrix server and can then be made available as a published application to users.
2. All users will require read/write/execute permissions to Maxload Pro folder.
3. Software internally manages concurrent user licensing; no third party metering software is required. Those who access the software in View Only mode do not count against the concurrent user limit.
4. Provisions are in place for distinguishing between viewers of old/completed work and generating new work.
5. MaxLoad Pro can also be installed on a Citrix server farm with load balance. In order to do this, the MaxLoad license must be installed on a common file server shared by all the Citrix servers so that the licenses can be shared amongst Citrix server.
