

Version 3.6 (June 2013)

	Feature Description	How to Access
<div data-bbox="167 241 336 273"><b>L-Shape SKUs</b></div> <div data-bbox="183 285 524 436"> </div> <div data-bbox="565 237 976 443"> <p>New L-shaped SKUs like sofa or other furniture pieces can be defined, in standard L-shape or with a slope side.</p> <p>When defining L-Shape SKU, there is an option to create a bundle and MaxLoad will optimize this bundle dimension automatically.</p> </div> <div data-bbox="256 464 883 657"> </div>	<div data-bbox="1003 258 1539 583"> <p>Under the Define menu, select SKU. Use the SKU Style drop down list to select "LShape" and then define the dimensions and weight.</p> <p>With the new L-Shape SKU selected under the Define SKU dialog box, click on the Bundle button to access the L Shape Bundle dialog box. Click on the Optimize button to calculate the recommended bundle dimension.</p> <p>Once defined, you have the option to load this L-shape SKU as bundle or single item during manual editing.</p> </div>	
<div data-bbox="167 720 524 751"><b>Placement Highlight in 3D View</b></div> <div data-bbox="167 762 724 1140"> </div>	<div data-bbox="1003 720 1539 982"> <p>This feature is activated by clicking the highlight button on the toolbar.</p>  <p>In the Placement List tab, users will see the highlighted placement in color 3D view while other placements are outlined in wire frames only.</p> </div>	
<div data-bbox="167 1203 313 1234"><b>SKU Bundle</b></div> <div data-bbox="167 1245 678 1633"> </div> <div data-bbox="703 1203 976 1581"> <p>When defining SKUs, there is the new ability to set multiple preferred bundle sizes. This feature applies to all SKU type but is specifically useful for thin SKUs like wood planks, metal sheets, etc.</p> <p>MaxLoad will load the SKUs in the preferred bundle sizes depending on the quantity and loading space available.</p> </div>	<div data-bbox="1003 1192 1539 1644"> <p>At the Define SKU dialog box, click on the Bundle button and enter up to three bundle sizes plus any pallet used to carry the bundled SKUs. Slacks can also be specified to accommodate use of clamp tools, etc.</p> <p>Depending on the quantity of the SKUs, MaxLoad will load the SKUs in the preferred bundle size as specified.</p> <p>During manual editing, SKUs with bundle defined will see an additional dialog asking whether to add SKU as single unit or as a bundle. Select the predefined bundle option and click on OK to load the bundle into the vehicle.</p> <p>Important: To use this feature, you will need the "DoBundle=TRUE" statement in Load Rules.</p> </div>	
<div data-bbox="167 1675 573 1969"> </div>	<div data-bbox="605 1686 938 1749"><b>Use Multiple Pallet Styles for Pallet Manifest</b></div> <div data-bbox="605 1749 971 1885"> <p>Similar to truck manifest, you can now specify multiple pallets to be used for pallet manifests and decide which ones will be best for the loads.</p> </div>	<div data-bbox="1003 1686 1539 1896"> <p>At the Pallet Manifest Pick List screen, place check marks <input checked="" type="checkbox"/> against the pallets you'd like to use.</p> <p>Turn off "CalcAllTrucks" to evaluate one pallet load at a time. This option is available under Tools&gt;Configuration&gt; Global when you log in as Supervisor.</p> </div>

Feature Description	How to Access																																																												
<div style="display: flex; justify-content: space-between;"> <div style="width: 30%;">  </div> <div style="width: 65%;"> <p><b>Allow Multiple Pallet Styles in Truck Manifest</b>                      When placing SKUs on mixed pallets in a truck manifest, multiple pallet styles can be specified.                       The preferred pallet style to be used is determined by the "Loading Priority" in the Pallet Definition setup screen.</p> </div> </div>	<p>Go to the Mixed Pallet tab in the truck manifest picklist screen and place check marks <input checked="" type="checkbox"/> against the pallets you'd like to use. Before calculation, make sure to tell MaxLoad the preferred pallet style to use.</p> <p>Go to Define&gt;Pallet to set the Loading Priority for the pallet style. MaxLoad will use the style with a higher priority unless the SKU cannot fit on the preferred pallet.</p>																																																												
<p><b>Support Priorities within Stops</b></p> <div style="display: flex; justify-content: space-between;"> <div style="width: 30%;">  </div> <div style="width: 65%;"> <table border="1" data-bbox="462 598 893 808"> <thead> <tr> <th>SKU</th> <th>Qty</th> <th>SD</th> <th>Prior</th> <th>Order#</th> <th>% Cube</th> </tr> </thead> <tbody> <tr><td>Computer</td><td>15</td><td>1</td><td>1</td><td>1</td><td>4.2%</td></tr> <tr><td>Computer</td><td>20</td><td>2</td><td>1</td><td>1</td><td>5.6%</td></tr> <tr><td>Deepfreezer</td><td>28</td><td>1</td><td>1</td><td>0</td><td>36.0%</td></tr> <tr><td>Lamps</td><td>20</td><td>1</td><td>2</td><td></td><td>6.0%</td></tr> <tr><td>Refrigerator</td><td>26</td><td>2</td><td>2</td><td>0</td><td>25.8%</td></tr> <tr><td>Stereo</td><td>34</td><td>2</td><td>2</td><td>0</td><td>3.3%</td></tr> <tr><td>Stove</td><td>30</td><td>2</td><td>2</td><td>0</td><td>31.4%</td></tr> <tr><td>TV</td><td>38</td><td>3</td><td>1</td><td>0</td><td>23.9%</td></tr> <tr><td></td><td>211</td><td></td><td></td><td></td><td>136.1%</td></tr> </tbody> </table> </div> </div>	SKU	Qty	SD	Prior	Order#	% Cube	Computer	15	1	1	1	4.2%	Computer	20	2	1	1	5.6%	Deepfreezer	28	1	1	0	36.0%	Lamps	20	1	2		6.0%	Refrigerator	26	2	2	0	25.8%	Stereo	34	2	2	0	3.3%	Stove	30	2	2	0	31.4%	TV	38	3	1	0	23.9%		211				136.1%	<p>Add both stop off and priority to the manifest list and in the options tab, make sure to enable "Stop &amp; Priority".</p> <p>MaxLoad will load according to priorities for each stop.</p> <p><b>Note:</b> When Stop &amp; Priority is enabled, you can use the Maximum Priority Overlap to control the overlap between the stop offs.</p>
SKU	Qty	SD	Prior	Order#	% Cube

<div style="display: flex; justify-content: space-between;"> <div style="width: 30%;">  </div> <div style="width: 65%;"> <p><b>Air Bag / Dunnage</b>                      When enabled, this option highlights spaces in between SKU placements meeting the specified criteria.</p> <div style="border: 1px solid gray; padding: 5px; width: fit-content;"> <p><b>Dialog</b></p> <p>min Length: <input type="text" value="10"/> OK</p> <p>min Width: <input type="text" value="10"/> Cancel</p> <p>min Height: <input type="text" value="15"/></p> </div> </div> </div>	<p>At the Solutions view, click on the Air Bag / Dunnage tab at the bottom. Enter the minimum dimensions in the pop-up dialog box for MaxLoad to highlight the available space among placements.</p> <p>The space will be highlighted in the 3D graphics view with dimensions and locations provided in the table. Use this information to determine if dunnage materials will be needed to protect and secure the load during transport.</p>																																																												
<div style="display: flex; justify-content: space-between;"> <div style="width: 30%;">  </div> <div style="width: 65%;"> <p><b>Color Stop Off Report</b>                      SKUs within the same stop will share the same color in the Load Manifest.                       The Summary report will list SKUs by stops.</p> </div> </div>	<p>To view reports, go to File and select Multi Preview. Click against the reports you'd like to view and print.</p> <p>To view individual report, go to File and select Print Preview.</p> <p>Select "Summary" for the report which list SKUs per stop off.</p>																																																												
<p><b>Adjust Weight Distribution</b></p> <div style="display: flex; justify-content: space-around;">  </div>	<p>At the Solution View screen, click on the Weight button to open a side view of the vehicle load. Use the move buttons ( &lt;- &lt;- &gt;&gt; &gt; ) to move the entire load towards front or back of the truck. The weight at King Pin and Trailer Axle will be adjusted accordingly.</p>																																																												

## Feature Description

## How to Access

### Weight Limit

With Weight Limit defined, MaxLoad will try to load the order within these limits. Violations will be highlighted in red so users can edit the load manually to comply with weight restrictions.

**COG Deviation** – not implemented.

Go to the new Weight tab and specify "Weight Limit". Select the Region from the drop down list for predefined weight limits for the region.

To define weight limits for each region, e.g. state, click on the Edit Regions button. At the Region dialog, click on New, enter the name of the region, enter the corresponding weight limits and click on Save. Click on the Close button to return to the Manifest Pick List screen.

## Custom Reports and New Reports

The custom report allows users to specify the data to be included in the graphical load report and load summaries.

Go to Print Preview and then Customized Reports. Select Graphical Report or Summary Report to specify the data to be included.

Data specified in the Graphical report will appear in the Manifest report while data specified in the Summary Report can be added to the Load List or Placement List.

New reports including Load by Layer (for pallet manifest only), Load by Placement Edge and customized load summary and graphics reports.

### More Powerful Load Rules

To optimize specific loads, you can use special load rules in MaxLoad.

For example, these rules can specify use of location codes, to allow SKU overhang or use bridged space, using bundles, minimize end gap for the container and much more.

You can set different load rules for different scenarios or customers to optimize their loading needs.

Click the Algorithms button under the Options tab to access the Algorithm Options dialog. Select from the drop list the predefined set of Loading rules to use.

For more information on load rule settings and how to define them, please contact TOPS Help Desk.

## Easier Way to Add, Update and Edit SKUs

Above the SKU List is a new input area to easily add or update SKUs to the Manifest List. You can also quickly access SKU edit screen without going through the Define menu.

SKU List				Manifest List							
SKU	Description	Dims	Wgt	SKU	Qty	Prior	Order#	% Cube	% Wgt	Cube	Wgt

Case 2	Sample Case 2	19x13x16 (in)	11 (lb)		177			126.1%	65.9%		
Case 3	Sample Case 3	12x8x13 (in)	15 (lb)								
Case 4	Sample Case 4	23x21x17.5 (in)	14 (lb)								

Type in the SKU name or select it from the SKU list, enter quantity and other information, then click the Add button to add the SKU to the manifest.

You can now access the Define SKU dialog box via the right click menu from the SKU List as well as from the Edit button in the Properties dialog at the 3D Solution view (right click the SKU and select Properties).

Feature Description	How to Access
<div data-bbox="214 237 495 485"> </div> <p><b>Advanced Data Filter</b> A new file filter allows users to view a list of manifests meeting specified criteria: manifest name, user name, customer name and manifest dates.</p>	<p>At the File Open dialog, click on the Filter button to access the Options dialog box. Check against the filter options (Manifest, User, Customer, Date) available and enter the data in the relevant fields. For Name (manifest) and Customer, you can enter partial names. For User, click the drop down arrow and select from the list.</p>
<div data-bbox="181 514 657 804"> </div> <p><b>Export Load Diagram</b> Export the 3D load diagram to a graphics file.</p>	<p>At the Solution View or Edit screen, point to the load and click the right mouse button. Select Export and then the file format. You will be prompted for a location to save the file.</p>
